

Problem-Solution Fit

Date	01 October 2026
Team ID	SWTID-2026-5235
Project Name	Import Data Using Transform Maps (Spreadsheets)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to show how the Import Data Using Transform Maps solution addresses the needs, problems, behaviors, limitations, and root causes of HR and administrative users importing employee spreadsheet data into ServiceNow.

1. CUSTOMER SEGMENT(S) [CS] • HR users • Administrative users • ServiceNow users handling employee records	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] • Employee data arrives in spreadsheets • Manual checking takes time • Limited tolerance for duplicate or incorrect records	5. AVAILABLE SOLUTIONS PROS & CONS [AS] • Excel + manual entry — simple, but error-prone • ServiceNow Import Sets — structured staging • Transform Maps — automated mapping and transformation
2. PROBLEMS / PAINS + ITS FREQUENCY [PRI] • Incorrect or incomplete employee data during imports • Duplicate employee records • Repeated import and validation effort	9. PROBLEM ROOT / CAUSE [RC] Spreadsheet data needs mapping and validation Existing records need reliable matching Repeated imports can create duplicates without Coalesce	7. BEHAVIOR Prepare employee spreadsheets Upload data repeatedly when records change Check imported records and correct errors
3. TRIGGERS TO ACT [TR] • New employee data is available • Existing employee details change • HR needs updated employee records in ServiceNow	10. SOLUTION [SL] • Import spreadsheet data into an Import Set Table. • Use a Transform Map to map, transform, and validate fields. • Use Employee ID with Coalesce to update existing records and prevent duplicates. • Review results through reports and dashboard.	8. CHANNELS OF BEHAVIOR [CH] • ONLINE • ServiceNow web interface • Excel spreadsheet upload • Reports and dashboard • OFFLINE • Preparation of employee spreadsheet OFFLINE
4. EMOTIONS BEFORE / AFTER [EM] • Before: Concerned about errors and duplicates • After: Confident that records are transformed, updated correctly, and duplicates are avoided
