

Code-Layout, Readability and Reusability

Date	01 October 2026
Team ID	SWTID-2026-5235
Project Name	Import Data Using Transform Maps (Spreadsheets)
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the structure, readability, maintainability, and reusability of the ServiceNow import configuration and related project components. The solution uses organized tables, Transform Maps, validation, Coalesce, reports, and dashboard components.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform formatting and configuration naming are maintained across ServiceNow components.	Yes	Consistent naming and configuration formatting used across the project.
2	Proper File Structure	Project files and configuration artifacts are logically organized.	Yes	Spreadsheet source and ServiceNow configuration components are kept organized.
3	Meaningful Variable Names	Field and variable names clearly reflect their purpose.	Yes	Employee fields and mappings use descriptive names such as Employee ID.
4	Function / Method Names	Configured actions and transformation logic are descriptively named.	Yes	Transform and validation logic is organized around clear data-processing purposes.
5	Code Comments	Comments or descriptions explain important transformation and validation logic.	Partial	Documentation is provided for key configuration and transformation steps; more comments can be added where needed.
6	Modular Design	The solution is split into reusable tables, mappings, validation rules, and reporting components.	Yes	Import Set, Transform Map, Coalesce, reports, and dashboard are separate reusable components.
7	No Redundant Code	Duplicate or unnecessary configuration/logic is avoided.	Yes	Coalesce and structured transformation reduce repeated data handling and duplicate records.
8	Error Handling	Import and transformation errors are identified and handled appropriately.	Yes	Validation and transformation checks help identify incorrect or incomplete employee data.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technolog	yWhere Reused	Reusability Level (High / Medium / Low)
1	Transform Map	ServiceNow	Employee spreadsheet imports	High

2	Import Set Table	ServiceNow	Each spreadsheet import workflow	High
3	Coalesce / Employee ID Matching	ServiceNow	Repeated imports and existing employee updates	High
4	Data Validation / Field Mapping	ServiceNow	Employee data transformation and validation	High
5	Reports & Dashboard	ServiceNow	Monitoring import and employee record results	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	The ServiceNow import workflow is separated into clear tables, mappings, validation, and reporting components.
Readability	4	Field names and workflow components are descriptive and easy to follow.
Reusability	5	Import Sets, Transform Maps, Coalesce, validation, reports, and dashboard components can be reused for repeated imports.
Documentation / Comments	4	The workflow is documented through structured configuration and project documentation; additional inline explanations can improve maintainability.
Overall Score	4.25	The project uses a structured and reusable ServiceNow configuration for spreadsheet-based employee data imports.
