

Performance Testing

Date	01 October 2026
Team ID	SWTID-2026-5235
Project Name	Import Data Using Transform Maps (Spreadsheets)
Maximum Marks	5 Marks

Performance Testing

Performance testing documents how the employee spreadsheet import workflow behaves during data loading, transformation, validation, and record updates in ServiceNow.

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow platform / browser-based testing
Type of Testing	Load Testing
Target Module / API	Employee Spreadsheet Import → Import Set Table → Transform Map → Employee Test Table
Test Environment	ServiceNow development instance
Test Date	15 March 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Upload employee spreadsheet into Import Set Table	10	60	Spreadsheet records are loaded into the Import Set Table successfully.
2	Run Transform Map for employee field mapping and transformation	10	60	Employee fields are mapped and transformed correctly.
3	Validate data and apply Employee ID Coalesce	10	60	Existing records are updated and duplicate records are prevented.
4	Review imported records, reports, and dashboard	10	60	Employee Test records and reporting results are available for review.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 seconds	Pass	Representative value; replace with measured result.
2	Response Time (Max)	< 5 seconds	2.8 seconds	Pass	Representative value; replace with measured result.
3	Throughput (Req/sec)	>= 10	15 requests/sec	Pass	Representative value; replace with measured result.
4	Error Rate	< 1%	0.5%	Pass	Representative value; replace with measured result.
5	CPU Utilization	< 80%	45%	Pass	Representative value; replace with measured result.
6	Memory Utilization	< 80%	52%	Pass	Representative value; replace with measured result.

Step 4: Observations & Analysis

Key Findings: 21 employee records were processed successfully. Existing records were updated correctly using Employee ID Coalesce. Duplicate records were reported as created.
Bottlenecks Identified: No slow step or processing error was reported.
Optimization Steps Taken: Review Employee ID Coalesce and the transform/import result to determine why duplicate records were reported. Replace the sample evidence in Step 5 with actual ServiceNow screenshots.

Step 5: Screenshots / Evidence
